The current vCloudPoint website is built with Wordpress.

Before you reproduce the vCloudPoint site, you need to purchase a domain and a web hosting account.

The site dummy sources include a database SQL file and a zip file of installation files.

http://www.vcloudpoint.com/vcloudpoint-website-files-2016-2-4.zip

http://www.vcloudpoint.com/vcloudpo_dummy-2016-2-4.sql

1. Login to your hosting Cpanel, go to the FTP account manager, create an FTP account and the Mysql database manager to create a database and add a user to it.

2. Go to phpMy Admin page, import the SQL file.

3. Go to the FTP file manager, and upload the zip file to your hosting server under the directory of public_html. Extract the files.

4. Among the extracted files, find the file named "wp-config-copy.php", delete"-copy" to get the real "wp-config.php" file. edit the wp-config.php as below:

   Replace "**http://your-site.com**" with your own domain name; such as http://www.vcloudpoint.co.uk

   Replace "**your database name**" in "DB_NAMER" with your own database name;

   Replace "**your database username**" in "DB_USER" with your own database user name;

   Replace "**your database password**" in "DB_PASSWORD" with your own database password;

   For most cases, you don't have to change "localhost".

```
// ** MySQL settings - You can get this info from your web host
** //
/** The name of the database for WordPress */
define( 'WP_AUTO_UPDATE_CORE', false );
define('WP_HOME','http://your-site.com');
define('WP_SITEURL','http://your-site.com');
define('DB_NAME', 'your database name');

/** MySQL database username */
define('DB_USER', 'your database username');

/** MySQL database password */
define('DB_PASSWORD', 'your database password');

/** MySQL hostname */
define('DB_HOST', 'localhost');

/** Database Charset to use in creating database tables. */
define('DB_CHARSET', 'utf8');

/** The Database Collate type. Don't change this if in doubt. */
define('DB_COLLATE', '');
```

Click save and then your site would be up and running, now you can go to the www.your-site.com/wp-admin and login with admin name: **admin**; password: **vcloudpoint123** and then modify the content as you want.

Note:

1, if you encounter error message of "error establishing data base connection" it may be reasons of

1) you didn't properly change all the information to your own in the wp-config.php file; check that file again

2) your hosting server is not capable of running the website; try uninstalling some plugins at the wordpress backend system or upgrading your shared hosting account to VPS or dedicated server, or not using the hosting server for other purposes but hosting this website only.

2, the wordpress theme and some plugins installed are paid, if you want to continue use them, pls purchase separately from the providers. Support of wordpress and plugins are to be provided by their respective owners.

3, the wordpress auto update function is closed in fear that some plugins may not be compatible with the new version of wordpress. If you like to turn it on, simple change the value of "false" to "true" in the line of "define('WP_AUTO_UPDATE_CORE', false) " in the wp-config.php file.
